

Pure Virtual function ÷

A pure virtual function in C++ is a virtual function in a base class that do not have definition and must be overridden in derived class.

It is not allowed to create object of a class containing pure virtual function.

Syntax ÷ `virtual return_type function_name() = 0;`

Program ÷ `#include <iostream>`
`using namespace std;`

Class A

{

public:

virtual void fun1() = 0;

};

Class B : public A

{

public:

void fun1()

{

DATE _____

```
cout << "Hello jii Sita sam!!";
```

```
void main()
```

```
{
```

```
    B obj;
```

```
    obj.fun1();
```
